GENERAL INFORMATION:

APPLICANT: Le, Junming

APPLICANT: Vilcek, Jan

APPLICANT: Ghrayeb, John

APPLICANT: Ghrayeb, John

APPLICANT: Siegel, Scott

TITLE OF INVENTION: Anti-TNF Antibodies and Peptides of

TITLE OF INVENTION: Anti-TNF Antibodies and Peptides of

TITLE OF INVENTION: Auman Tumor Necrosis Factor

TITLE OF INVENTION: AUman Tumor Necrosis Factor

TITLE REFERENCE: 0975.1005-013

CURRENT APPLICATION NUMBER: US/10/010,229

CURRENT APPLICATION NUMBER: US/09/927,703

PRIOR FILING DATE: 2001-08-10

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                             US-09-674-716B-1

                                                                                                                                                                                                                                                                                                                                                                                                        the v-k167 gene codes for a v region which binds phosphocholine.

all rearrangements of the v-k167 gene reported here are productive, and in all cases except hybridoma hepcals the codon at the site of recombination is cog in hycgis the codon is cct. the difference could be due to the variability of the v-j recombination site, or it could be an additional somatic mutation. [3] sequenced portions of the j-c intron and the c-kappa gene for all of its hybridomas and myelomas, and found no somatic mutation in these regions. [3] proposes a mechanism for the generation of clustered somatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mutation in the v-j region.

for the germline sequences of the v-k167 v and j regions see for the germline sequences of the v-k167 v and j regions see rearranged kappa genes; see loci beginning musigkvb2>, cmusigkvb2>, cother rearranged kappa genes; see loci beginning cmusigkv> for germline kappa v regions and see loci beginning cmusigky> for the germline determining regions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chote-Vector: pTTT3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - Oilgo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pTT3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "

priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was circularized with E. coil DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coil ToplOF' by electroporation method. The CDNA libraries constructed by this method are full-length enriched cDNA libraries to a large of the constructed by t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Endocrine Pańcreas Consortium

marrow were purified by magnetic cell sorting. mRNA were
purified and an oligo d(T)8 primer containing XhoI
restriction site was used to prime first strand synthesis
using M-MLV reverse transcriptase. To protect the cDNAs
from XhoI digestion in subsequent cloning step, the
nuclectide analogue 5-methyl-dCTP was added to monitor
the quantity and quality of first strand synthesis. After
second-strand synthesis and blunting of cDNA termini,
ECORI adapters were ligated, followed by kinase treatment
and digestion with XhoI. The cDNAs were then
size-fractionated using Sepheacryl S-500 column and then
ligated into ECORI and XhoI digested Lambda Zap Express
vector. The ligation product was packaged using Gigapack
II peackaging extract. The library had primary litre of
approx. 1x106. Clones from the primary library were
randomly selected for single pass sequencing."
